Visual Report Design for TurboImage and Eloquence

Designed for both front and back office users, VISIMAGE for Windows is the report writer recommended by Summit for accessing TurboImage and Eloquence databases and other files.

- **Customized for Spectrum Clients**
Use special functions, customized documentation and on-site training services to maximize users' productivity quickly and efficiently.
- **The Power of AskPlus**
Visimage creates reports using the powerful AskPlus data reporting language. Complex reports that aren't possible with other tools are easily created with Visimage.
- **Report Creation**
Design both printed reports and data extracts. Visimage builds extract files on either the host server or the workstation. All major file formats are supported including Microsoft Excel and Access. Information from multiple databases can be combined in a single report.

Visimage plays a critical role in our reporting environment. We use it daily to generate normal production reports, tag files and ad-hoc queries. Vital Soft's support staff is extremely knowledgeable, professional and very responsive. We couldn't be happier with our decision to go with Vital Soft, and Visimage.

Report Design without Limits

Visual

Point and Click

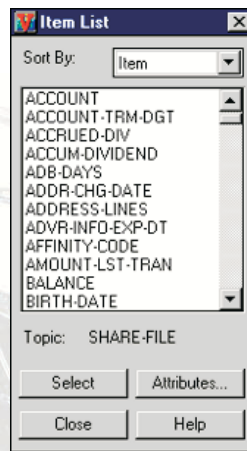

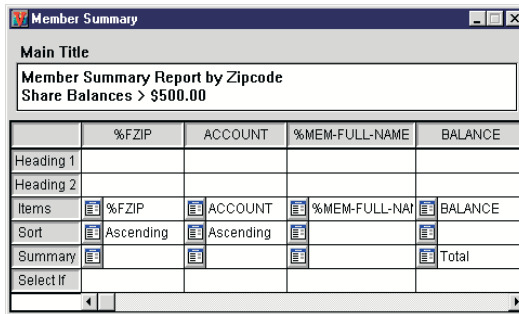

Visimage is the original visual report writer for TurboImage. Report design for Eloquence and TurboImage is identical. Choose to create a quick tabular list or use the full-featured report layout. With no code to type, report creation is more efficient for all users.

Database Navigation

Reports in Visimage can be based on a single set or a combination of multiple sets. Visimage automatically lists related sets and builds a list of database items from only the sets you choose. Need to check what type of data an item contains? Sample values are available at any time and can be looked up without interrupting the design process.

On-line Help

Documentation and detailed examples for all AskPlus functions are available in Visimage. Can't remember how to convert a date or search for a substring? Examples are only a click away.

Versatile

AskPlus behind the scenes

All of the reporting functionality of AskPlus is available from within Visimage. Simple queries, ranged data selections, complex variable calculations and multi-pass reports are all easily defined in Visimage.

Custom Spectrum Macros

Visimage Macros are functions that perform common formatting chores like combining first and last names, or correctly displaying both 5 and 9 character zip codes. Users can define additional macros for quick reuse.

Output Flexibility

Visimage offers a variety of PC and host output options. Report output can be viewed online, printed or sent directly to Excel, Access, Word or your favorite PC application. Visimage also creates host files for multi-pass reporting or for use as TAG files.
